
VIENNA AORTIC VALVE SE

SELF-EXPANDABLE TRANSCATHETER VALVE

PREMOUNTED SYSTEM
DRY PERICARDIUM

P&F PRODUCTS & FEATURES

GmbH

The **VIENNA** AORTIC VALVE SE self-expandable transcatheter valve is designed to treat at severe

Aortic stenosis in patients at medium to high risk for open heart surgery. The minimal invasive heart valve replaces the native valve without the need for concomitant surgical removal and is placed via the femoral access. The new generation comes fully premounted with specially prepared **bovine pericardium**, thus reducing the time of the procedure and the preparation steps.

23 mm Valve

26 mm Valve
